_____

Abstract : "Information at finger tips" says the agenda of the work very much clearly. Basic idea behind this work is to provide an easy and most suitable way for users to find the information. Today's generation is keen to gain knowledge, hence this platform will play an important role to help them and to act as a bridge that connects very easily to the required information is our main motive. We've considered the issue of Shopping. As there is increasing growth in the cities, the resources have also increased. We can say that for one thing there are multiple options present nowadays. Every citizen wants to be smart buyer where he can make his profit in terms of product quality and great discounts also. To tackle this issue we are building this system where they can search any related information. The operations will be performed in Python3. We will be providing an interface where the information can be accessed. To advance it one step further we will be using a chat bot for any assistance.

Keywords: **Shopping Mart Survey,Python3, Chat-bot.**
_____

I. INTRODUCTION

To research about a certain topic is an interesting task where we come across more unknown information. We are well known about a quote rightly said by Thomas B. Macaulay that *'half knowledge is more dangerous than ignorance'*, we provide some basic information through our project. The data which the user can access is a real-time data collected through Google forms. Visualites are performed in weka tool and python3 and they're uploaded for the user to access the information.

The whole process of finding information will be assisted by a chat bot. The whole process is integrated with each other in such a way that the user can find whatever information he desires with ease.

II.DATASET COLLECTION

Are you a Localite or Outsider in Pune?	Which shopping mart do you prefer for all the shopping items?	For which items do you prefer this mart?	What makes you choose this mart?	How would you rate this mart
Localite	D Mart	All items i.e daily use stuff	Discounts	Good
Outsider	Big Bazaar	All items i.e daily use stuff	Products	Good
Outsider	D Mart	All items i.e daily use stuff	Discounts	Good
Localite	D Mart	All items i.e daily use stuff	All in one store	Excellent
Outsider	D Mart	Clothes;All items i.e daily use stuff;Electric…	All in one store	Excellent
…	…	…	…	…
Outsider	Big Bazaar	Clothes	Discounts	Good
Localite	Reliane Mart	All items i.e daily use stuff	Discounts	Excellent
Localite	Star Bazaar	Electric Appliance	Discounts	Good

Fig1.
Dataset imported from Google forms.

Dataset was collected through Google forms. Collected data is a Real-Time Data. Google form consisted of 5 main questions, focusing on the depth of an issue. This form was circulated amongst the local public. Their valuable responses were taken for further Analysing operations.

III.LITERATURE SURVEY

By a wide margin the biggest and generally dubious of these excessively focus outlets is Wal-Mart. Wal-Mart regularly experiences huge resistance from contending outlets and from worker's organizations, who frequently speak to laborers in these contending outlets[1].

Non-customary outlets, including super focuses, stockroom club stores, and mass merchandisers have developed in ubiquity and almost multiplied a lot of customer nourishment at-home consumptions from 1998 to 2003[2].

Most of Wal-Mart's basic food item deals emerge from its more than 1400 (as of April 2004) super focuses, which normal 180,000square feet per store and contain both rebate and supermarket things, in spite of the fact that it likewise has some 'Neighbor hood Market' stores that are about the size (40,000 sq. ft) of a normal supermarket[3].

Over the previous decade, non-customary shopping designs have caught noteworthy offer from conventional markets and traditional grocery stores. Little (2004) portrays the two classifications of elective retail outlets as 'high-spend' outlets, which are low-value, one-quit shopping goals, and 'low and medium-spend' stores which are generally accommodation stores that serve a 'fill-in' job in the middle of excursions to the 'high-burn through' outlets[4].

Individuals build up their pictures of some random store through a mental procedure which between relates feelings and perspectives about unmistakable and emblematic qualities of the store[5].

Frameworks and techniques are uncovered for alarming a client when a thing is unavailable or in stock. In epitomes, the client may add things to a shopping list inside a shopping list programming application (ordinarily known as an "application") introduced on a portable registering gadget, for example, a savvy phone[6].

A web based shopping improvement framework takes a rundown of things a client needs to buy by going to one additional stores or merchants and recognizes those nearby stores from which the client can make the buys in an ideal way as per any model or criteria that the client wants. The merchants may have a physical nearness that the client will visit to make the purchase[7].

Consumer loyalty is at the core of all advertising exercises. From the items and administrations offered to the wayin which they are evaluated, advanced, dispersed, and sold the advertiser is centered around fulfilling client needs[8].

A client chooses items to be bought, and an improved shopping way is consequently registered dependent on at least one factors, for example, item value, shipper area, client inclination for specific vendors, and whether a trader has specific items in inventory[9].

This investigation expected to comprehend buyer shopping an incentive inside and out by looking at purchaser shopping procedures and encounters in two retail arranges: mass merchandisers and office stores[10].

V.PROPOSED SYSTEM

The main idea behind to deploy this work is to provide an most efficient output which will help the customers.By having a look at the observation, we can say that the Shopping marts provide average services to the public. To reach out the customers expectation, the services are unable to provide the facilities up to the mark. To improve the system we need a strong and ideal solution which will benefit the customers. Solutions are not hard to find but hard to implement. By checking the analyzed information the customer can think accordingly from where to shop.
